

## **FILE TYPES:**

### **BMP**

Raster image (made up of small color rectangles). Better quality than jpeg. Does not scale larger - image will pixelate. Import as a picture into programs.

### **JPG**

Raster image also. Smaller size file than bitmap and lower resolution. Good for email attachments. Does not scale larger - image will pixelate. Import as a picture into programs.

### **PDF (Adobe Acrobat file extension)**

A file format supported by Adobe Acrobat. Widely used by printers.

### **EPS (Encapsulated PostScript)**

A file format that supports both vector and raster images. This file scales to any size. Use this file for printers & screenprinters.
